US-09-144-886-89

Sequence 88, Application US/09144886

Patent No. US-20020155114A1

GENERAL INFORMATION:

APPLICANT: Marks, James B

TITLE OF INVENTION: Therapeutic Monoclonal Antibodies That Neutralize

TITLE OF INVENTION: Detail Nourocoxins

FILE REFERENCE: 2500.1170SO

CURRENT APPLICATION NUMBER: US/09/144,886

CURRENT FILENCE PATE: 1998-08-31

NUMBER OF SEQ ID NOS: 98

SEQ ID NO 88

SEQ ID NO 88

MARCH AND SEC ID NOS: 98

SEQ ID NO 88

MARCH AND SEC ID NOS: 98

SEQ ID NO 88

J. Bacteriol. 181:4308-4317(1999).
-!-FUNCTION: METHILATION OF THE MEBRANE-BOUND METHYL-ACCEPTING CHEMOTAXIS PROTEINS (MCP) TO FORM GAMMA-GLUTAMYL METHYL ESTER RESIDUES IN MCP (BY SIMILARITY).
-!-CATALYTIC ACTIVITY: S-adenosyl-L-methionine + protein L-glutamate = S-adenosyl-L-homocysteine + protein L-glutamate methyl ester.
-!-SIMILARITY: CONTAINS 1 CHER-TYPE METHYLTRANSFERASE DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 "A lysosomal cysteine proteinase from Dictyostelium discoideum contains N-acetylglucosamine-1-phosphate bound to serine but not mannose-6-phosphate on N-linked Oligosaccharides.";
J. Biol. Chem. 271:10897-10903(1996)
-:-FUNCTION: CYSTEINE PROTEINSES I AND 2 ARE BELIEVED TO PARTICIPATE IN THE BREAKCHOWN OF PROTEIN DURING DIFFERENTIATION OF DICTYOSTELIUM AS A RESPONSE TO STARVATION.
                             MEDLINE-83189071; PubMed-6221115; Sanger F., Coulson A.R., Hong G.F., Hill D.F., Petersen G.B.; Sanger F., Coulson A.R., Hong G.F., Hill D.F., Petersen G.B.; Sanger F., Coulson A.R., 1902 G.F., 1902 G.F., Mol. Biol. 162:729-773 (1982).

-I- FUNCTION: GENE E PROTEIN IS A MAJOR COMPONENT OF THE PHAGE HEAD. THERE ARE ABOUT 420 COPIES OF PROTEIN E PER MATURE PHAGE. SOME OF THE E PROTEIN IS COVALENTLY LINKED MITH AN EQUIMOLAR AMOUNT OF PROTEIN C AND CLEAVED TO YIELD MINOR CAPSID PROTEINS X1 AND X2.

-I- SIMILARITY: STRONG, TO MAJOR HEAD PROTEIN OF PHI-80 AND P21.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -!- PTM: PHOSPHOGLYCOSYLATED, CONTAINS GLCNAC-ALPHA-1-P-SER RESIDUES.

                                                                                                                                                             SEQUENCE EROM N.A.

RYDACAL IF, Childs G.;
Submitted# (FEB-1997) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: GENERAL FACTOR THAT PLAYS A MAJOR ROLE IN THE ACTIVATION OF EUKARYOTIC GENES TRANSCRIBED BY RNA POLYMERASE II. TFIID BINDS SPECIFICALLY TO THE TAM BOX PROMOTER ELEMENT WHICH LIES CLOSE TO THE FOSTION OF TRANSCRIPTION INITIATION.
-!- SUBMIT: BINDS DAM AS A MONOMER.
-!- SUBMIT: BINDS DAM AS A MONOMER.
-!- SUBCELLULAR LOCATION: UNLClear.
-!- SIMILARITY: BELONGS TO THE TBP FAMILY.

- I- FUNCTION: MAY BE INVOLVED IN THE CONTROL OF CAMP-MEDIATED NEURAL ACTIVITY AND CAMP METABOLISM IN THE CONTROL OF CAMP-MEDIATED NEURAL OF CATALYTIC ACTIVITY: Adenosine 3',5'-cyclic phosphate + H(2)0 = adenosine 5'-phosphate 3',5'-cyclic phosphate + H(2)0 = copector: Regulated Divalent Cations (BY SIMILARITY).

- I- COFACTOR: REGULATION: INHIBITED BY DIPYRIDAMOLE, IBMX AND SCH51866.

- I- ENZYME REGULATION: INHIBITED BY DIPYRIDAMOLE, IBMX AND SCH51866.

- I- PATHWAY: Cyclic nucleotide metabolism.

- I- PATHWAY: Cyclic nucleotide metabolism.

- I- STATEN SKELETAL MUSCLE AND PANCREAS.

- I- DOMAIN: COMPOSED OF A C-TERMINAL CATALYTIC DOMAIN CONTAINING TWO PUTATIVE DIVALENT METAL SITES AND AN N-TERMINAL REGULATORY DOMAIN.

- I- SIMILARITY: BELONGS TO THE CYCLIC NUCLEOTIDE PHOSPHODIESTERASE

-i- FUNCATION: MAY FUNCTION IN THE EXPORT OF COPPER FROM THE CYTOPLASM
TO AM INTRACELLULAR ORGANELLE. IT MAY SERVE AS WELL FOR THE EXPORT
OF OTHER METALS.

-i- CATALYTIC ACTIVITY: ATP + H(2)O + Cu(2+)(In) = ADP + phosphate +
                                                                                                                                                                                                   Camakarishu, Petris M.J., Balley L., Shen P., Lockhart P., Glover T.W., Barcroft C., Patton J., Mercer J.F.; "Gene amplification of the Menkes (MNK; ATP7A) P-type ATPase gene of CHO cells is associated with copper resistance and enhanced copper efflux."

Squence 19, Application US/09910059

Patent No. US20020142359A1

GENERAL INCORPARTION:

APPLICANT: Edge, Michael Derek

APPLICANT: Edge, Michael Derek

APPLICANT: Edge, Michael Derek

TILE OF INVENTION: Monoclonal Antibody to CEA, Conjugates Comprising Said Antibod

TILE OF INVENTION: Their Therapeutic use in an Adept System

FILE REFRERENCE: 1991-209

CURRENT APPLICATION NUMBER: US 09/171,945

PRIOR APPLICATION NUMBER: US 09/171,945

PRIOR APPLICATION NUMBER: PCT/GB97/01165

PRIOR PLILNG DATE: 1997-02-14

PRIOR FILING DATE: 1997-02-14

PRIOR FILING DATE: 1997-02-14

PRIOR FILING DATE: 1997-02-14

PRIOR FILING DATE: 1996-05-04

NUMBER OF SEQ ID NOS: 131

Gyamma chain V region (JS34/32) - mouse
C;Species: Mus musculus (house mouse)
C;Species: Mus musculus (house mouse)
C;Species: Nus musculus (house mouse)
C;Species: 20-Feb-1995 #sequence_revision 20-Feb-1995 #text_change 20-Jun-2000
C;Accession: S24289
R;Moncharmont, B.
Submitted to the EMBL Data Library, September 1991
A;Description: Cloning and sequencing of the cDNA coding for the variable regions of A;Reference number: S24287
A;Reference number: S24289
A;Rolecule type: mRNA
A;Residues: 1-116 <MON>
A;Cross-references: EMBL:X62705; NID:951690; PIDN:CAA44584.1; PID:g1333963
